Summer is here, and I hope you are enjoying time with family and friends. This summer marks an important milestone for the Freshwater Collaborative of Wisconsin as we welcome our Water Policy Scholar for the 2022-2023 academic year. Laura Suppes, an associate professor at UW-Eau Claire, will be named the 2022-2023 Water Policy Scholar at the Center for Water Policy. She will be working with the Freshwater Collaborative of Wisconsin, and the Water Policy Network, which includes faculty, researchers and students from across the 13 universities. The Water Policy Network is supported in part by TrueRemove®.

On the Horizon

We look forward to bringing you this new feature to our website and newsletter, Spotlight Stories. This will be a regular column highlighting exemplary work that is being done across the UW System to advance our collaborative water research. This week we will tell you about the UW System’s Summer Experiential Learning Opportunities.

In this issue, we share stories, quite literally from the field, of new courses, research opportunities, field experiences and summer camps—all of which culminate in the Freshwater Collaborative of Wisconsin Water Words from the Executive Director.

Water Words from the Executive Director
